

**COMPLETE SET OF PENDING CLAIMS**

1-16. (Cancelled)

17. (Previously Presented) A table saw comprising:

a table adapted to support a workpiece,

a saw unit disposed above the table and pivotable with respect to the table about a pivotal axis, the saw unit comprising a saw blade, a motor housing and a blade case covering an uppermost portion of the saw blade, the blade case having a rear portion defined closest to the pivotal axis and a front portion defined farthest from the pivotal axis,

a battery-driven motor disposed within the motor housing and adapted to rotatably drive the saw blade,

a battery mounting device disposed at the rear portion of the blade case and

a rechargeable battery detachably mounted within the battery mounting device, wherein the rechargeable battery is disposed above the pivotal axis.

18. (Previously Presented) A table saw as in claim 17, wherein the blade case further comprises a handle having a rear portion defined closest to the pivotal axis and a front portion defined farthest from the pivotal axis, wherein the battery mounting device is disposed at the rear portion of the handle.

19. (Previously Presented) A table saw as in claim 18, wherein the handle further comprises a switch disposed at the front portion of the handle, the switch manually actuating the motor.

Attorney Docket No. 54014.8901.US00

20. (Previously Presented) A table saw as in claim 19, wherein the battery mounting device is disposed on the handle in a position substantially adjacent to the pivotal axis.

21. (Previously Presented) A table saw as in claim 18, wherein the battery mounting device is disposed on the handle in a position substantially adjacent to the pivotal axis.

22. (Previously Presented) A table saw as in claim 17, wherein the battery mounting device is disposed such that when the saw unit is in an uppermost vertical pivot position, the battery center of gravity is positioned on one side of a vertical plane extending through the pivotal axis while the saw unit center of gravity is positioned on the other side of the vertical plane, and such that when the saw unit is in a lowermost vertical pivot position, the battery center of gravity is positioned substantially within the vertical plane.

23. (Previously Presented) A table saw as in claim 22, wherein the battery mounting device and the rechargeable battery serve as a counterweight to the motor when the saw unit is in the uppermost vertical pivot position.

24. (Previously Presented) A table saw as in claim 23, wherein the blade case further comprises a handle having a rear portion defined closest to the pivotal axis and

a front portion defined farthest from the pivotal axis, wherein the battery mounting device is disposed at the rear portion of the handle.

25. (Previously Presented) A table saw as in claim 24, wherein the handle further comprises a switch disposed at the front portion of the handle, the switch manually actuating the motor.

26. (Previously Presented) A table saw as in claim 17, wherein the battery mounting device further comprises a lid and a hinge, wherein the lid is pivotable to open and close the battery mounting device and the rechargeable battery is disposed within the battery mounting device and lid to thereby prevent foreign particles from entering the rechargeable battery.

27. (Previously Presented) A table saw as in claim 17, wherein the battery mounting device and the rechargeable battery extend in a plane that is substantially parallel to the table when the saw unit is in an uppermost vertical pivot position.

28. (Previously Presented) A table saw as in claim 17, wherein the battery mounting device and the rechargeable battery serve as a counterweight to the motor when the saw unit is in an uppermost vertical pivot position.

29. (Previously Presented) A table saw as in claim 17, wherein the battery mounting device includes a battery case having an opening adapted to discharge foreign particles that enter the battery case.

30. (Previously Presented) A table saw as in claim 17, wherein the blade case, the battery mounting device and the motor are positioned substantially within the same plane as the saw blade.

31. (Previously Presented) A table saw as in claim 30, wherein the motor has a motor shaft that extends in parallel with a rotational axis of the saw blade and is spaced therefrom, and wherein a belt transmits rotation of the motor shaft to the saw blade.

32. (Previously Presented) A table saw as in claim 31, wherein the blade case further comprises a handle having a rear portion defined closest to the pivotal axis and a front portion defined farthest from the pivotal axis, wherein the battery mounting device is disposed at the rear portion of the handle.

33. (Previously Presented) A table saw as in claim 32, wherein the handle further comprises a switch disposed at the front portion of the handle, the switch manually actuating the motor.

34. (Previously Presented) A table saw comprising:  
a table adapted to support a workpiece,  
a saw unit disposed above the table and pivotable with respect to the table about a pivotal axis, the saw unit comprising a saw blade, a motor housing and a blade case covering an uppermost portion of the saw blade,

Attorney Docket No. 54014.8901.US00

a battery-driven motor disposed within the motor housing and adapted to rotatably drive the saw blade,

a battery mounting device disposed on the blade case and

a rechargeable battery detachably mounted within the battery mounting device, wherein the rechargeable battery and the battery mounting device are disposed above the table and are substantially aligned in the same plane as the saw blade.

35. (Previously Presented) A table saw as in claim 34, wherein the motor is also substantially aligned in the same plane as the saw blade.

36. (Previously Presented) A table saw as in claim 35, wherein the motor has a motor shaft that extends in parallel with a rotational axis of the saw blade and is spaced therefrom, and wherein a belt transmits rotation of the motor shaft to the saw blade.

37. (Previously Presented) A table saw as in claim 34, wherein the blade case further comprises a handle and the battery mounting device is disposed on the handle.

38. (Previously Presented) A table saw as in claim 37, wherein the handle further comprises a switch disposed within a front portion of the handle, the switch manually actuating the motor.

39. (Previously Presented) A table saw as in claim 34, wherein the battery mounting device further comprises a lid and a hinge, wherein the lid is pivotable to open

Attorney Docket No. 54014.8901.US00

and close the battery mounting device and the rechargeable battery is disposed within the battery mounting device and lid to thereby prevent foreign particles from entering the rechargeable battery.

40. (Previously Presented) A table saw as in claim 34, wherein the battery mounting device includes a battery case having an opening adapted to discharge foreign particles that enter the battery case.

41. (Previously Presented) A table saw comprising:  
a table adapted to support a workpiece,  
a saw unit disposed above the table and pivotable with respect to the table about a pivotal axis, the saw unit comprising a saw blade, a motor housing and a blade case covering an uppermost portion of the saw blade,  
a battery-driven motor disposed within the motor housing and adapted to rotatably drive the saw blade,  
a battery mounting device disposed on the blade case and  
a rechargeable battery detachably mounted within the battery mounting device,  
wherein the battery mounting device is disposed such that when the saw unit is in an uppermost vertical pivot position, the battery center of gravity is positioned on one side of a vertical plane extending through the pivotal axis while the saw unit center of gravity is positioned on the other side of the vertical plane, and such that when the saw unit is in a lowermost vertical pivot position, the battery center of gravity is positioned substantially within the vertical plane.

42. (Previously Presented) A table saw as in claim 41, wherein the battery mounting device and the rechargeable battery serve as a counterweight to the motor when the saw unit is in the uppermost vertical pivot position.

43. (Previously Presented) A table saw as in claim 41, wherein the blade case has a rear portion defined closest to the pivotal axis and a front portion defined farthest from the pivotal axis, wherein the battery mounting device is disposed at the rear portion of the blade case.

44. (Previously Presented) A table saw as in claim 43, further comprising a handle extending from the blade case and a switch disposed at a front portion of the handle, the switch manually actuating the motor.

45. (Previously Presented) A table saw as in claim 41, wherein the battery mounting device further comprises a lid and a hinge, wherein the lid is pivotable to open and close the battery mounting device and the rechargeable battery is disposed within the battery mounting device and lid to thereby prevent foreign particles from entering the rechargeable battery.

46. (Previously Presented) A table saw as in claim 41, wherein the battery mounting device includes a battery case having an opening adapted to discharge foreign particles that enter the battery case.

47. (Previously Presented) A table saw comprising:

Attorney Docket No. 54014.8901.US00

a table adapted to support a workpiece,  
a saw unit disposed above the table and pivotable with respect to the table about  
a pivotal axis, the saw unit comprising a saw blade and a handle and  
a battery mounting device disposed on the handle and above the pivotal axis.

48. (Previously Presented) A table saw as in claim 47, wherein the handle has  
a rear portion defined closest to the pivotal axis and a front portion defined farthest from  
the pivotal axis, and the battery mounting device is disposed on the rear portion of the  
handle.

49. (Previously Presented) A table saw as in claim 47, further comprising a  
rechargeable battery disposed within the battery mounting device.

50. (Previously Presented) A table saw as in claim 49, wherein the battery  
mounting device is disposed such that when the saw unit is in an uppermost vertical  
pivot position, the battery center of gravity is positioned on one side of a vertical plane  
extending through the pivotal axis while the saw unit center of gravity is positioned on  
the other side of the vertical plane, and such that when the saw unit is in a lowermost  
vertical pivot position, the battery center of gravity is positioned substantially within the  
vertical plane.

51. (Previously Presented) A table saw as in claim 49, wherein the battery  
mounting device and the rechargeable battery serve as a counterweight to the motor  
when the saw unit is in the uppermost vertical pivot position.

52. (Previously Presented) A table saw as in claim 48, wherein the handle further comprises a switch disposed at the front portion of the handle, the switch manually actuating the motor.

53. (Previously Presented) A table saw as in claim 47, wherein the battery mounting device further comprises a rechargeable battery portion, a lid and a hinge, wherein the lid is pivotable to open and close the battery mounting device to thereby prevent foreign particles from entering the rechargeable battery portion.

54. (Previously Presented) A table saw as in claim 47, wherein the battery mounting device includes a battery case having an opening adapted to discharge foreign particles that enter the battery case.

55. (Previously Presented) A battery-powered table saw comprising:  
a table having a generally horizontal surface adapted to support a workpiece,  
a saw unit vertically movably supported above the table, the saw unit comprising a saw blade,  
an auxiliary table disposed adjacent to the table, the auxiliary table having a horizontal surface substantially in parallel to the table horizontal surface and a side surface generally perpendicular to the horizontal surface and  
a battery mounting device disposed within the side surface of the auxiliary table.

Attorney Docket No. 54014.8901.US00

56. (Previously Presented) A battery-powered table saw as in claim 55, further comprising a rechargeable battery detachably mounted within the battery mounting device.

57. (Previously Presented) A battery-powered table saw as in claim 55, further comprising a battery-powered motor is disposed on a first lateral side of the saw blade and the battery mounting device is disposed on a second lateral side of the saw blade, wherein the first lateral side is opposite of the second lateral side.

58. (Previously Presented) A battery-powered table saw as in claim 55, wherein the battery mounting device is disposed in the side surface of the auxiliary table that faces an operator during use of the table saw.

59. (Previously Presented) A battery-powered table saw as in claim 55, wherein the battery mounting device is disposed in the side surface of the auxiliary table that is opposite of an operator during use of the table saw.
